

PROFILE

Software developer with experience in production environments and end-to-end solution delivery. Academic background in Information Systems and hands-on experience with APIs, microservices, asynchronous messaging, databases, containers, and deployment. Interested in contributing to high-impact, maintainable systems that support real-world processes.

EXPERIENCE

Junior Full-Stack Developer · Autoinspector

Nov 2021 – Nov 2022

Insurance technology platform focused on automating inspections and validations through AI.

- Implemented features across backend services and frontend applications for a production product.
- Worked with a microservices architecture and asynchronous communication; contributed to implementation, testing, and deployments.
- Stack:** TypeScript, NestJS, Next.js, MongoDB, RabbitMQ, Docker, and Git.

Freelance Developer · Online Learning Platform

May 2026 – Present

- Building an online learning platform from scratch for a healthcare professional, including requirements gathering, technical definition, and iterative implementation.

Developer · Necto (Personal Project)

2026 – Present

- Designing and developing a platform that connects users with home-service professionals, focused on data modeling, APIs, and business processes. **necto.com.ar**

Freelance Developer · CEPA Argentina

2025

- Developed and deployed the institutional website for a non-profit organization alongside a UX/UI designer, including content management. **Astro, Tailwind CSS, Decap CMS, and Vercel.**

EDUCATION

BSc in Information Systems (in progress) · Faculty of Informatics, UNLP

2018 – Present · 23 completed courses
Coursework in algorithms and data structures, databases, software engineering and project delivery, OOP, operating systems, networking, concurrency, programming paradigms, and technical English.

LANGUAGES

Spanish: Native
English: Intermediate — reading, writing, and conversation

TECHNICAL SKILLS

- Backend & architecture:** TypeScript, JavaScript, Python, NestJS, Express, Django, Flask, FastAPI, REST APIs, workers/jobs, microservices, and monoliths.

Platform & delivery: Docker, Docker Compose, GitHub Actions (CI/CD), Git, GitHub, GitLab, Bash, and Linux.
- Data & messaging:** PostgreSQL, MongoDB, MySQL, Redis, RabbitMQ, and data modeling.

Cloud & frontend: Cloudflare, R2, Vercel, Render, Railway, React, Next.js, HTML, CSS, Tailwind CSS, and UI libraries.
